\*\*\*\*\* This is my first C# application so please excuse the errors. My problem is that when the program gets to the line: oExcel.Visible = false; then I get a NullReferenceException, but I don't know why because the above line gets executed before the line oExcel.Application = Microsoft.Office.Interop.Excel.Application; Even if the line: is executed after the line: the program still runs fine and I can use oExcel afterwards. This is the code: string strConnectionString = "Provider=Microsoft.ACE.OLEDB.12.0;Data Source=" + Server.MapPath("folder/file.xlsx"); System.Data.OleDb.OleDbConnection oConnection = new OleDbConnection(strConnectionString); oConnection.Open(); System.Data.OleDb.OleDbCommand oCommand = oConnection.CreateCommand(); System.Data.OleDb.OleDbDataAdapter oDataAdapter = new OleDbDataAdapter(); System.Data.DataSet oDataSet = new DataSet(); oDataSet.Tables.Add(new

---

```
DataTable("testtable")); oCommand.CommandText = "SELECT * FROM testtable"; oDataAdapter.SelectCommand =  
oCommand; oDataAdapter.Fill(oDataSet); oCommand.ExecuteNonQuery(); oCommand.Parameters.Add("@list",  
OleDbType.Integer, -1); oCommand.Parameters["@list"].Value = -1; oConnection.Close(); for (int i = 0; i
```
